

ASCC Hosts Second Laser Scanning Workshop for Concrete Construction Tolerances

The American Society of Concrete Contractors (ASCC), will hold a second Laser Scanning Workshop on Concrete Tolerances, Monday, January 21, 2019, from 8 a.m.—5 p.m. in Las Vegas, NV, at the Westgate Hotel, in conjunction with the World of Concrete. Dr. Bruce Suprenant, PhD, PE, FACI, CSI: CCA, CCS, technical director of the ASCC, is the workshop coordinator.

The workshop is by invitation only and is limited to 50 individuals. General and concrete contractors, manufacturers of laser scanning equipment, scanning processing companies, and others in the industry will present and discuss 3D laser scanning for concrete tolerances.

The morning will feature presentations on separate topics while the afternoon will be devoted to working groups discussing best practices. The objective is to develop content for a draft of the ACI-ASCC 117 committee’s new document on “Guide to 3D Laser Scanning for Concrete Tolerances.”

Featured this year will be a discussion of the laser scanning data obtained at an ASCC sponsored laser scanning repeatability and reproducibility event that involved eight companies. Those participants will discuss their best practices for 3D laser scanning for concrete tolerances.

Proposed ACI-ASCC 117 Document

Guide to Using Laser Scanning for Concrete Tolerances

- Roster
- Synopsis
- Keywords
- Table of Contents

Chapter 1 Introduction

- 1.1 Introduction
- 1.2 Scope
- 1.3 Notations
- 1.4 Definitions

Chapter 2 Basics of Laser Scanning

- 2.1 Introduction
- 2.2 Equipment
 - 2.2.1 Time of flight
 - 2.2.2 Phase shift
- 2.3 Setting up
- 2.4 Point clouds
- 2.5 Processing point clouds
 - 2.5.1 Object extraction
 - 2.5.2 Registration
 - 2.5.3 Segments
- 2.6 Analyzing data
- 2.7 Deliverables

Chapter 3 Planning the Use of Laser Scanning

- 3.1 Introduction
- 3.2 Purpose of Scan
- 3.3 Equipment selection
- 3.4 Level of Accuracy (LOA)
 - 3.4.1 Introduction
 - 3.4.2 Measured Accuracy
 - 3.4.3 Represented Accuracy
- 3.5 LOA Validation
 - 3.5.1 Introduction
 - 3.5.2 Measurement Validation
 - 3.5.3 Representation Validation
- 3.6 Specifying scanning services
- 3.7 Deliverables

Chapter 4 Data Collection: Getting a Point Cloud

- 4.1 Introduction
- 4.2 Site Assessment
- 4.3 Targets and Spheres
- 4.4 Setting up
- 4.5 Document process

Chapter 5 Data Processing: from a Point Cloud to Analysis

- 5.1 Introduction
- 5.2 Registration
- 5.3 Segmenting
- 5.4 Cleaning
- 5.5 Converting to object
- 5.6 Special challenges
- 5.7 Data analysis

Chapter 6 Reporting Laser Scanning Results

- 6.1 Introduction
- 6.2 Specification compliance
- 6.3 Document the investigation process
- 6.4 Verify data
- 6.5 Data analyzed and reported

Chapter 7 Deliverables: Vertical Elements

- 7.1 ACI-ASCC 117 applicable tolerances
- 7.2 Location of walls and columns
- 7.3 Plumb of walls and columns
- 7.4 Recommended practice for deliverables

Chapter 8 Deliverables: Horizontal Elements

- 8.1 ACI-ASCC 117 applicable tolerances
- 8.2 Floor flatness and levelness
- 8.3 Elevation
- 8.4 Location of reinforcement
- 8.5 Recommended practice for deliverables

Chapter 9 Special Topics

- 9.1 Adjusting fresh concrete
- 9.2 Stairs
- 9.3 Slopes
- 9.4 Camber
- 9.5 Gradual and abrupt irregularities

Chapter 10 Repeatability and Reproducibility

- 10.1 Test methods and procedures
- 10.2 Repeatability and reproducibility
- 10.3 Precision and bias statement

Chapter 11 References

- 11.1 Standards
- 11.2 Cited references
